

# Animal Health Prevention and Controls for Aquaculture Animals (AA) Fact Sheet

## LEARNING OBJECTIVES

This training module aims to inform participants on the health status of aquatic animals (fish, molluscs and crustaceans) and to enable you to implement measures to prevent the introduction and spreading of diseases that affect them. Six different training Units will enable them to improve their knowledge and practical skills on:

- EU Provisions related to the control of aquatic diseases listed in Council Directive 2006/88/EC Annex IV.
- Pathogens and diseases listed in Directive 2006/88/EC.
- Epidemiological surveillance, health inspection and sample collection procedures.
- Inspection and sampling procedures.
- Measures to be taken in case of outbreaks (various scenarios, study cases).
- Notifications at internal and EU level, information and experience exchange.

## CONTENT INDEX

- Pre-test
- Welcome
- Unit 1. EU provisions related to controlling aquatic diseases.
- Unit 2. Pathogens and diseases listed in Council Directive 2006/88/EC.
- Unit 3. Epidemiological surveillance, health inspection and sample collection.
- Unit 4. Inspection and sampling procedure.
- Unit 5. Measures to be taken in case of outbreaks.
- Unit 6. Notifications at internal and EU level, information and experience exchange.
- Post-test
- BTSF participant Satisfaction Questionnaire

## Duration

**Total estimated duration of this e-Learning module is around 6/7 hours.**

Please note that the effective duration of the learning process is influenced by some different factors:

- The initial background in this field
- The study method
- The attention dedicated to more readings such as in depth contents, useful links, etc.

## Participants

Eligible beneficiaries are National Authority staff dealing with animal health prevention and controls for aquaculture animals in EU Member States, as well as in Non-EU Countries.
